The Path To Progress illustrates the Chiropractic healing process and the effect of patient choices to continue care.

It all starts with a Catalyst Event and the loss of health or function that can lead patients to the choice to begin care.

There are blank lines to write in the date and new or existing treatment plan.

The choice is yours. How long you choose to benefit from chiropractic care is always up to you.

Chiropractic results may vary and the healing process is unique for each individual. Most children, along with patients with minor problems can respond quickly, while others with longstanding health issues tend to heal more slowly. There are three stages of chiropractic care. Periodic progressive examinations help determine the course and length of your care. Like brushing your teeth, eating wholesome foods and other healthy habits, regular chiropractic checkups make sense.

An important key to this chart is understanding Patient Choice. Patients are in charge of their own personal wellness goals and how often they choose to receive care.

Continued progress allows for patients to choose again as they move toward optimum health with Proactive or Wellness care.

The continuum line shows visit frequency spreading out as their progress continues through Initial Intensive Care, Corrective Care and finally to Proactive or Wellness Care.

If patients make the choice to continue with more active care during the Corrective Care phase, they move up the path of recovery.

Choosing to discontinue care too soon may lead to a relapse and a need to begin the whole process all over again.

Simple and concise definitions of the Three Types Of Care are included at the bottom of the page for easy reference.

Curving lines during care represent that there may be some ups and downs during the recovery process.

Once they begin to feel better and are moving into the Corrective Care phase, they need to make a choice to continue their progress.
